

The Wrong Number][BBS

Updated: 12/23/2023 – Birthday: 10/01/2018

The Wrong Number][BBS consists of the following:

The Wrong Number][BBS runs in a Virtual Machine on a Proxmox Server housed on a Home built AMD Ryzen Machine with 64 gigs of RAM and 6TB of Storage.

8 Gigs Of RAM

250 Gig Hard Drive

Windows 11 Pro Tiny 11 64 Bit Operating System

This BBS runs a WinUAE Amiga Emulator which runs a A4000 with Amiga OS 3.2.2.1 emulation with everything maxed out. Thus the reason the BBS is so fast. It also runs a BinkD Server for the Networks that are carried. Not all of the Networks that are carried on Wrong Number][BBS are carried here, bits and pieces of them are.

This BBS caters to Retro Computing. Mainly Commodore and Amiga, it carries the entire 1993 Wrong #][File Library. Plus other files added since it is up.

A brief History of this BBS, this BBS was put online October 1st, 2018, It was the second Amiga BBS I have run, the first was an Excelsior! BBS back in 1993 through 1994. This is the first C-Net BBS I have run since approximately October of 1988 when I changed over to the Image world of the C64 BBS programs.

This BBS carries via a Mystic BBS Front End every Door Server that is carried on Wrong Number][BBS.

There's still more where this came from'!
